

TO REDUCE WASTED MATERIALS & SPENDING,

Think inside the box.

Paccurate is a smarter cartonization engine that reduces costs and waste. It's flexible enough to enhance any touchpoint in your Order to Cash process, without getting in the way.

Save Money

Choosing smaller cartons (and filling them with items, not air) will lower your shipping spend and reduce wasted materials, but you can go even further.

The terms outlined in your carrier agreements carry unintuitive incentives to pack a certain way. Paccurate can navigate those automatically to optimize for cost.

Reduce Errors

Packing errors are one of the most costly expenses in any shipping operation, and even experienced packers make mistakes.

Add an extra layer of control to improve packers of all qualification levels, and get new hires and seasonal packers up to speed, fast.

Minimize Damage

When it comes to fragile items, why leave it up to packers and rule-of-thumb instructions. Every SKU should have its own set of rules to ensure it gets packed securely, and delivered undamaged.

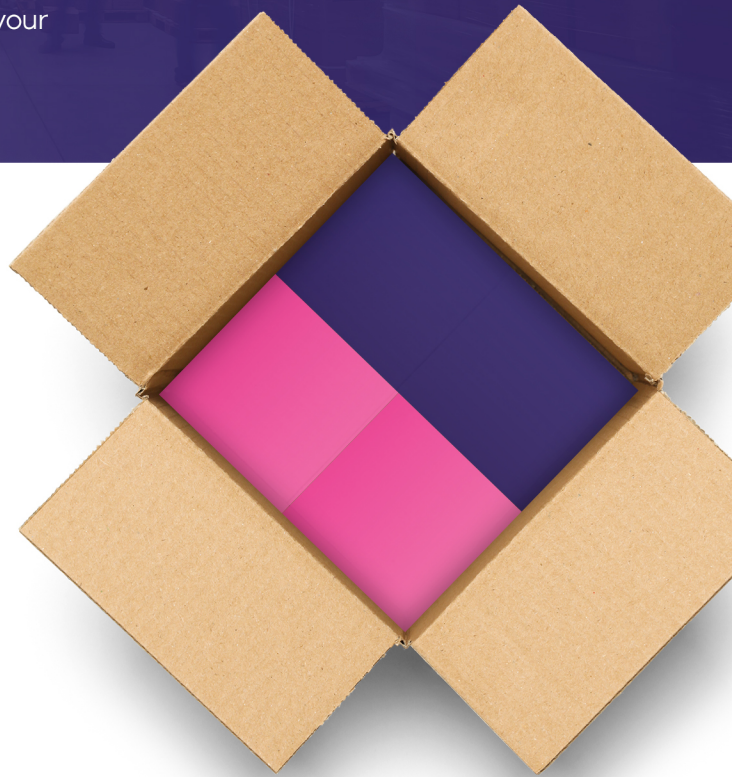

Less damage means fewer returns, and fewer returns means more happy and loyal customers.

Be Tactical

Access Paccurate from any point in your order to cash, or procure to pay process, wherever you see the need.

Our "unique transaction" pricing is tied to your orders, so you can make multiple calls with different carriers and rules on the same order without getting double-charged.

Go Green

Paccurate provides a step toward a sustainable fulfillment process, where your savings are strongly correlated with a lower carbon footprint. Taking up less space means less trucks on the road and planes in the air!

Let your customers know that you care about the planet.

Display our Sustainable Packing badge in your online store.
